

YieldSpan™

Set your spread. Control your term. Sell anytime.

Sector: Fintech / Digital Fixed-Income / Blockchain Infrastructure

IP Status: Provisional Patent Filed – April 2025

Availability: Licensing | Strategic Partnership | Acquisition

Key Applications:

- Crypto-native alternative to 1–5 year U.S. Treasury bonds
- Institutional-grade DeFi with predictable return structures
- Tokenized fixed-income products for DAOs, treasuries, or stable asset pools
- High-yield asset class for underbanked regions or borderless financial access

YieldSpan enables the creation of secure, yield-bearing digital assets that mimic the predictability and structure of traditional bonds—without relying on legacy intermediaries. Each token is minted based on a user-selected yield spread and backed by on-chain treasury funds. Redemption occurs at a predetermined maturity date, with value growing at a dynamic rate tied to real-world market benchmarks.
