

Skybridge™

Inspired by Da Vinci. Built for the Future.

Sector: Aerospace / Modular Transport / Tactical Logistics

IP Status: Provisional Patent Filed – April 2025

Availability: Licensing | Strategic Partnership | Acquisition

Key Applications:

- Emergency or military transport across rivers, canyons, or collapsed roads
- Humanitarian corridors in disaster zones
- Rapid-deployment aerial scaffolding or observation posts

SkyBridge is a modular, drone-assembled aerial infrastructure system inspired by the elegant ingenuity of Da Vinci's bridge designs. Built for the future, it creates temporary midair pathways for crossing terrain, deploying aid, or mobilizing resources in hard-to-reach areas. Using magnetically latched micro-drones in hexagonal formations, SkyBridge forms scalable, floating structures that can be assembled, traversed, or connected into mobile sky platforms.
